Average																		

Average of all type & size of hoses

Average cost of per meter hose for all size & type (A)

Average cost of fitting for all size (B)

Average cost of hose assy (A + 2B)

Bidder1	Bidder 2	Bidder 3

Note :

1. L1 will be decided on the basis of lowest A + 2B landed cost.
2. If any bidder have not quoted for any particular size of end fitting, then in that case the average will be decided on the number of quoted items. However, UCIL will order for that required fitting on the basis of rate of the next lower size fitting quoted by the bidder.
For Example: If bidder has not quoted for 1.1/4" size fitting then UCIL will order for 1.1/4" fitting on the rate of 1 inch, on the basis of rate of the next lower size fitting quoted by the bidder.
3. Similarly for hoses if the bidder has not quoted for all the items of hoses, then the average will be decided on the basis of no. of quoted items.
4. The bidder must quote for all the size and type of hoses.

Note for Evolution of L1 Price

1. Bidder shall mandatorily quote for all types of Hoses indicated in price schedule format. Bidders quoting against any size of hoses shall not be considered for further evaluation. However, it is not compulsory to bid for all types of fittings indicated in price schedule format.
2. In case bidder not quoting for any particular size of fittings, the rate of preceding quoted size of fittings shall be considered for calculating average cost of fittings.
3. If preceding quoted rate is not available, so nearest Succeeding/preceding rate of quoted size of fitting shall be considered for calculating average cost of fittings.
4. However, item no. 90 (Microbore Hose 2 mm) /DN2 & 91 (Microbore Hose 4 mm) DN4 shall not be considered for evaluation of L-1, But Bidder shall mandatorily quote for both items.
